Beautiful lawns made easy.

Enjoy the gift of time.

Tend to your garden without lifting a finger. Our Indego robotic lawnmowers enable you to save a great deal of time. They mow the lawn for you – fully automatically, cleanly and quietly, without the need to manually program the calendar.

The intelligent Indego travels up and down the lawn in parallel lanes. Indego will remember where it has already cut thanks to Logicut, the efficient navigation system.

Indego will work for you, even when you're out and about. You can control it at the touch of a button using an app.

Discover new lawn care options that suit your lifestyle now.

Better lawn care. More free time.

Get outdoors.

You don't need to go far to enjoy an attractive, healthy, lush-looking green space – just outside your patio doors.

At least, not if you have helpful assistants that can turn your garden into an oasis of green. The new Indego models automatically look after your lawn through a combination of mowing and mulching. They will help you to enjoy a lush, green lawn.

Your job is to simply relax and enjoy. On your own, or at a garden party with friends, a garden should be an enjoyable place to spend your time – not a chore.

Indego 350 / 400 and Indego 350 / 400 Connect

The lawn masters.

The new Indego robotic lawnmowers look after your lawn reliably and intelligently. Before beginning each complete mowing session, they start by mowing the edges of the lawn. They always know the most efficient and cleanest way to mow. They can navigate any obstacles in their way. When their battery is empty, they automatically return to their charging station to recharge.

They work quietly and quickly – and only ever when you want them to. With a noise level of just 63 dB, they are no louder than an indoor conversation and can mow a lawn up to 400 m² up to twice as fast as a random navigation system thanks to Logicut, their intelligent navigation system.

In addition, with Connected Technology, you can operate the Indego 350 Connect and the Indego 400 Connect remotely via an app – no matter where you are.

45 min. charging time

Works automatically

You will never need to mow your lawn again. The new Indego models care for your lawn so that you don't have to. Simply switch them on – and you can switch off.

Efficient cutting

With Logicut, the Indego works automatically in neat parallel lanes, which makes it up to twice as fast as a random navigation system. No area is left unmowed. And because it knows exactly where it has already been, you can use the lawn already mowed whilst Indego will finish cutting the rest.

Indego 350 / 400 and Indego 350 / 400 Connect

Anti-theft protection

If the Indego is unexpectedly removed from its defined mowing area, the system is locked. The Indego can only be unlocked by entering your PIN on the device itself.

AUTO Calendar Function

How big is the lawn? How long does it take to mow this area? The new Indego models analyse, calculate and determine the ideal mowing time on the basis of this data. Of course, they only work if you want them to. This time is then defined in the mowing calendar and used as the basis for carrying out mowing work. Your lawn automatically receives the care it needs. Every week. Every blade of grass.

Mowing and mulching

They mow the lawn regularly according to manual inputs – either after activating the automatic calendar function or as required. However, they only cut the tip of each blade of grass. The finely-cut grass falls on the ground and fertilises the lawn without suffocating it. This allows it to grow thick, lush and evenly.

Display

Easy to use interface. A self-explanatory display guides you through all the settings. You can set up the device with just a few clicks.

Indego 350 / 400 and Indego 350 / 400 Connect

Automatic charging

The battery is discharged after approximately 30 minutes of mowing, or after mowing an area of around 35 m². The Indego robotic lawnmowers then automatically return to their charging station, where they fully recharge their battery in just 45 minutes. After this, they continue mowing where they haven't mowed before. Efficient and intelligent.

Multi sensors

During the mowing session, smart sensors detect the lawnmower's surroundings. Bump sensors identify obstacles and automatically change the Indego's direction of travel if it comes into contact with an object that it does not recognise. Multi-sensors locate its position in the garden. The lift-up sensor responds as soon as the machine is lifted up. This causes the blades to stop immediately.

Adjust the cutting height

Adjust the height of your lawn at the push of a button. The cutting height can be set to one of three stages between 30 and 50 mm.

Manual stop button

Use the stop button to immediately shut down the motor and blades for optimum control, making the device even safer to use.

Indego 350 Connect and Indego 400 Connect

Beautiful lawns, even on the go.

At work, in town, on holiday – no matter how far away you are, the perfect lawn is always at your fingertips.

The two Indego Connect models make caring for your lawn child's play. All it takes is the touch of a button in the app. Anywhere in the world. Start and stop the lawnmower, specify mowing schedules or simply check to see if Indego is charging or out in the lawn mowing – you can do all of this easily, even when you're on the go.

AUTO

Smart Gardening app

An app designed for your comfort. Operate your Indego Connect and care for your lawn – it's at your fingertips. No matter where you are. It has a range of functions to help you out.

And if the Indego needs your attention, it will ensure you're always up to date – you can receive alerts to inform you of any interruptions while mowing or when the blades need to be replaced. If your app requires an update, you can carry this out simply and directly using your tablet or smartphone.

Lawn care compared.

Make sure that you have the equipment which suits you and your garden.
